BASE FACE ANTICIPATOR SETTING LEVER MOUNTING HOLE 1 TEMPERATURE SETTING LEVEL BASE BACK CAPPING SCREWS 2 Heat/cool thermostats are being used in conjunction with air conditioners and our furnace. The warranty, installation instructions and diagnostic information is provided by the manufacturer of the thermostat. However, if you need to isolate a furnace problem or a dual thermostat problem, by- pass the furnace wires at the thermostat. If the furnace ignites and heats, you have a thermostat problem. If the furnace does not run, the problem is in the furnace, and you should consult the trouble shooting guides in the back of this manual. • The hydro flame thermostat is equipped with a heat anticipator which allows one to adjust the length of the heating cycles. A furnace should cycle 5-6 times an hour. a. The anticipator is set at 1.0 on all hydro flame thermostats. If you want to shorten the heating cycle, move anticipator to a lower amp setting. You should not set lower than .48 which is the amperage rating of the gas valve. Setting any lower could burn out the anticipator wire. Note: Heat anticipator adjustments are not covered under warranty. OFF LEVER MOUNTING HOLE CAPPING SCREWS THERMOSTAT LOCATION • It should be on an inside wall 48˝-54˝ above the floor on an inside wall. • It should not be near areas of extreme heat or cold. • It should not be located directly across from a heat duct. • If installed on an outside wall, a 3/4˝ spacer must be used behind legs of thermostat. This will allow the thermostat to sense the air temperature and not the temperature of the wall. • A minimum of 22 gauge wire should be used to connect the thermostat to the furnace. We recommend 18 gauge stranded wire. 21 HEAT ONLY .20 .48 (valve amperage) 1.0 Anticipator setting ENGLISH, FRANCAIS THIS INSTRUCTION MANUAL IS FOR USE BY AN AUTHORIZED SERVICE TECHNICIAN TO INSTALL AN ATWOOD : INSTALLER LEAVE THIS MANUAL WITH APPLIANCE : CONSUMER RETAIN THIS MANUAL FOR FURTHER REF .
